

## Responder4000 Education for New Administrators

### Overview:

Don't lose a step! The Responder 4000 System is crucial for maintaining the high standards of care in your facility, as well as a core part of everyday workflow. Whether it's a leadership change or just time for a refresher, IMA is committed to providing a specialized education package designed for Administrators and Directors of Nursing. Our Design and Education Coordinators conduct a small group or individual training session focused on your specific Nurse Call Devices, Pocket Pagers, Wireless Devices, System Design, Management Reports and Troubleshooting. When the session is complete, you will be left with a complete knowledge of how your system was designed, where calls are going, how you can mine information, ways to receive additional support from IMA, and some helpful hints on how to make the system work even better for you.

### Administrator Training Includes

- Concise 2 hour training
- Tailored for your facility's specific equipment
- One-on-one or small group sessions
- Created especially for Administrators or DONs

Training packages are available for purchase at any time and are a great way to keep your staff fresh. Feel free to contact our Design and Education Department if you have questions regarding Ongoing Education Packages, options or to discuss your specific needs.
